PRESS RELEASE

Shipadmin into fisheries

Shipadmin welcomes Aker BioMarine ASA and M/T Saga Sea as a new user of Shipadmin Fleet Manager and Captains Secretary

Volda, Norway, 1st October, 2011: M/T Saga Sea will be using Captain Secretary, synchronizing data with FleetManager at Aker BioMarine headquarters.

Aker BioMarine is an integrated biotechnology company – uniquely positioned to create value krill derived biotech products. The company is supplying biomarine ingredients through an optimized value chain from raw materials to customer. M/T Saga Sea is one of the company's krill trawlers operating in the Antarctic.

Aker BioMarine has worked systematically to develop a new harvesting technology and has come up with a solution to krill harvesting challenges, called Eco-Harvesting. Harvesting krill in a commercially viable and environmentally sound way is challenging. Traditional trawling methods where the catch is hauled up on deck and emptied into holding tanks before processing is unsuitable, as the krill contains highly digestive enzymes and basically self-destructs before it can be processed. Furthermore, unwanted by-catch, e.g. of fish and seals, is a problem with regular trawling in the South Atlantic and may pose a threat to fragile marine eco-systems in the Antarctic.

Aker Eco-Harvesting fishing system allows the fishing net to stay under water during the entire operation. The krill is filtered at the end of the net and flows upwards in a flexible hose, with air injection creating the upward lift. The equipment stays under water while a continuous stream of water flows through the hose, bringing the krill live and fresh directly into the factory vessel, which allows for processing of fresh raw material with superior product quality.
