

## Shipadmin FleetManager 2.1 released!

It is a pleasure for us at Shipadmin to announce the release of FleetManager 2.1. FleetManager will soon be updated to version 2.1 on your ship. We would like to use this opportunity to thank all the users for the valuable input received during the process.

Most of the features in FleetManager (FM) 2.1 have been developed as a result of enquiries from you – our users – in accordance with our strategy.

### Main upgrades

#### Improved Incident Report Daily Figures

Overview of all reports with extended filter abilities  
Detailed overview of consumption and running hours for engines, thrusters, boilers, fresh water, fuel, urea and oil for the all vessels. Watch graphs to spot trends. Export the figures to PDF.

#### Norwegian NOx Tax

Automatically calculate proper NOx taxes for each vessel based on reported consumption. 4 calculation methods available. Optimize calculations by choosing method for calculation for each engine or boiler.

#### Restricted user access

Specify each person's module access

#### Report Generator

Generate custom reports on the fly

### Details about new features and changes

- Norwegian NOx Tax modules:
  - NOx Calculation
  - NOx Excise Duty Form – Generates the form “Blankett for særavgifter og gebyrer”
  - Urea Refund - Repository for urea receipts, generates the report “Egenerklæring for SCR-anlegg etter 3 måneders drift” and “Søknad om driftsstøtte til forbruk av urea på SCR-anlegg”.
- New module “Embarkation History” (placed under “History”). Get full track of all embarkations and disembarkations for all the vessels in your fleet. Export result to PDF, Word or Excel format.
- Change date and time format in the “Config” modul under “Settings”. Changes made here are reflected throughout the systems.
- New vessels options
  - Create new vessels within FM

shipadmin.com

- Edit engines, boilers and thrusters for vessels. Changes are reflected on the vessel. Required for NOx calculation and logging of consumption and running hour engines.
- Configure and get an overview of oil types for each vessel.
